Sequence Info, Application US/09198452A

Patent No. 655234

GENERAL INFORMATION:

APPLICANT: GTIFfais, R.

TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prevering the Petern Polication Number: US/09/198,452A

CURRENT APPLICATION NUMBER: US/09/198,452A

CURRENT PILING DATE: 1998-11-24

NUMBER OF SEQ ID NOS: 6849

LENGTH: 145
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-09-252-991A-18874

Sequence 1501-131.
Sequence 1501-131.
Patent No. US2002011681A1
GENERAL INFORMATION:
APPLICANT: Craig Rosen,
APPLICANT: Steve Ruben
TITLE OF INVENTION: Nucleic Acids, Proteins and Antibodies
FILS REFERENCE: PA10.
CURRENT APPLICATION NUMBER: US/09/925,300
CURRENT PILING DATE: 2001-08-10
PRIOR APPLICATION NUMBER: PCT/US00/05988
PRIOR APPLICATION NUMBER: 60/124,270
PRIOR APPLICATION NUMBER: 60/124,270
PRIOR FILING DATE: 1999-03-12
NUMBER OF SEQ ID NOS: 1890
SEQ ID NOS: 1890
SEQ ID NOS: 1890

                                   Sequence 4, Application US/08579823A

Patent No. 6080409

GENERAL INFORMATION:

APPLICANT: Ruegg, Curtis L.

APPLICANT: Wu, Hongyu

TITLE OF INVENTION: Immunostimulatory Composition and Method

NUMBER OF SEQUENCES: 10

CONRESPONDENCE ADDRESS:

ADDRESSEE: Dehlinge R. Associates

STREET: 350 Cambridge Ave. Suite 250

CONRESPONDENCE ADDRESS:

Sequence 68, Application US/08466680B
Patent No. 6075122
GENERAL INFORMATION:
APPLICANT: Cheever, Martin A.
APPLICANT: Disis, Mary L.
TITLE OF INVENTION: IMMUNE REACTIVITY TO HER-2/new PROTEIN
TITLE OF INVENTION: PRO DIAGNOSIS AND TREATMENT OF MALIGNANCIES IN WHICH THE
TITLE OF INVENTION: HER-2/new ONCOGENE IS ASSOCIATED
NUMBER OF SEQUENCES: 69
CORRESPONDENCE ADDRESS:
ADDRESSEE: Seed and Berry illp
STREET: 6300 Columbia Center, 701 Fifth Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        300

                                                                                                                                                                                                                                                                             Sequence 4, Application US/08473119
Patent No. 5820859
GENERAL INFORMATION:
APPLICANT: Kraus, Matchias H.
APPLICANT: Astronom, Stuart A.
TITLE OF INVENTION: AN ISOLATED POLYPEPTIDE RELATED TO THE
TITLE OF INVENTION: BPIDERMAL GROWTH FACTOR RECEPTOR, ANTIGEN THERETO, NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
